Step one: Create usable pilot/ mvp with searchable data scrape of 3 x DBs Step two:
Intermediate
integration with some
RSS/JSON pulls
running alongside
continued data scrape

Step three:
Maturing integration
with partial
engagement of some
farm management
software vendors.
Some API writes and
some rss/json pulls

Step four:
Online holding register reaches critical mass of read/write traceability data with near complete vendor participation. Markets and abattoirs scan tags on arrival and CTS/ARAMS/EAMLS are decommissioned
